

# Site built Saltroom

The site built saltroom allows for custom sizing and custom features such as optional lightning TV screen wall inserts, and windows to be incorporated into the plans.

Saltroom operates off of a regular 240VAC/10A outlet. The assembly normally takes about 3 full days.

The site built saltroom interior is sheet rocked then surfaced with rock salt using a patented method.

The visible exterior walls of the saltroom are surfaced with paneling and the salt generator is installed. The final assemble steps include installing lights, electrical outlets, speakers and the exhaust fan. The exhaust fan is ducted outside if possible. An optional glass door can make the saltroom feel roomier.

## Specialty Saltrooms

Specialty Saltrooms work identical to the regular saltrooms although they are normally built heavier duty than regular saltrooms. Specialty saltrooms are built to treat pets and horses. They can be site built or on a trailer thus being mobile to travel to horse stables or pet shows for example.
